

ARCHANA KUMARI

Full-Stack Software Engineer · Python · Django · FastAPI · React · Next.js

Bangalore, India • +91-8340488397 • archanakumari.swe@gmail.com • github.com/Archana-PC • linkedin.com/in/archana-kumari

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 2+ years of production experience building high-throughput, scalable web systems using **Python (Django, FastAPI)** and modern JavaScript (**React, Next.js**). Architected and engineered from scratch scalable enterprise systems including **E-Commerce, real-time Inventory Management, and POS billing** platforms. Proven track record designing distributed asynchronous task pipelines (Celery/RabbitMQ handling 10,000+ daily jobs with 0% data loss), cutting API latency by 40% with Redis caching, and engineering multi-tenant SaaS architectures with 100% tenant data isolation. Experienced in AI integrations (OpenAI API), payment gateways (PhonePe), and automated CI/CD deployments.

TECHNICAL SKILLS

Backend & Async:	Python, Django, FastAPI, Django REST Framework, Celery, RabbitMQ, Redis, Node.js
Frontend & UI:	React, Next.js, Redux Toolkit, RTK Query, Formik, Yup, Tailwind CSS, JavaScript (ES6+), HTML5/CSS3
Databases & DevOps:	PostgreSQL, MySQL, Redis (In-Memory), Firebase, MongoDB, Docker, Nginx, AWS, CI/CD, Git, Linux
Integrations & AI:	OpenAI API (Prompt Engineering, LLM Integration), PhonePe Payment Gateway, Ekart Logistics API
Architecture:	Microservices, Event-Driven Architecture, Distributed Systems, Multi-Tenant SaaS, JWT Auth, RBAC

PROFESSIONAL EXPERIENCE

Full Stack Developer · Cloud Software Solution · Bangalore, India Nov 2025 – Present

- E-Commerce, Inventory & POS (Engineered from Scratch):** Architected and built completely from scratch an enterprise E-Commerce management platform, real-time Inventory Management system, and POS billing engine (Django, Next.js) syncing live stock across **1,000+ retail SKUs** with automated order-to-dispatch workflows.
- High-Throughput Async Pipelines:** Designed Celery + RabbitMQ distributed worker pipelines processing **10,000+ daily background tasks** (order notifications, stock updates, invoice generation) with **zero message loss**.
- Latency Optimization:** Slashed API response times by **40% (sub-120ms P95)** by designing a multi-layer Redis caching strategy and optimizing PostgreSQL compound indexing.
- Franchise RBAC & Security:** Built modular Franchise Management module and granular Role-Based Access Control (RBAC) ensuring secure, role-specific data access across multi-location franchise staff.
- Payment & Logistics Integrations:** Integrated PhonePe payment gateway with idempotent webhook validation and automated reconciliation; integrated Ekart API for real-time parcel dispatch tracking.
- Automated CI/CD:** Configured automated CI/CD pipelines via GitHub Actions and Docker, achieving consistent zero-downtime releases.

Software Engineer · Comestro Pvt Ltd · India Sept 2024 – Oct 2025

- Examination Engine:** Spearheaded full-cycle development of an online examination platform (React + RTK Query) serving **5,000+ concurrent students** across 3 adaptive difficulty tiers.
- Multi-Tenant Architecture:** Architected multi-tenant SaaS platform enforcing strict schema isolation, guaranteeing **100% data partition integrity with zero cross-tenant leakage**.
- Dynamic Form Architecture:** Built 15+ complex dynamic forms with Formik + Yup schema validation, reducing form submission validation errors and support tickets by **35%**.
- Client Performance & Security:** Implemented JWT authentication with role-based route guards; cut redundant API roundtrips by **50%** through RTK Query normalized caching.

Full Stack Intern · Techjet.ai · India March 2024 – Aug 2024

- Built secure full-stack authentication flows (protected routes, sessions, JWT) across a React + Django platform.
- Integrated 10+ RESTful APIs and managed centralized application state using Redux Toolkit, decreasing code duplication by **40%**.

FEATURED PROJECTS

AI Resume Screener & Candidate Intelligence · github.com/Archana-PC/docsense-ai · Django, FastAPI, React, Celery, Redis, OpenAI API, PostgreSQL, Docker

- Engineered 4-service microservices application that automatically parses PDF resumes, extracts competencies, and ranks candidates against job descriptions using the OpenAI API.
- Architected asynchronous processing pipeline (PDF parser → Celery + Redis queue → AI scorer → PostgreSQL) preventing thread blocking; Dockerized entire stack for one-command deployment.

Knowledge Graph System — Database-Level Immutability · github.com/Archana-PC/brahmo-data-integrity · Python 3.11, FastAPI, Supabase, PostgreSQL, React, Vite

- Developed an append-only medical knowledge graph enforcing PostgreSQL database-level REVOKE permissions to guarantee tamper-proof audit trails against unauthorized UPDATE/DELETE operations.
- Engineered temporal SUPERSEDE node relationships for clinical history and built an interactive React/Vite graph explorer querying complex relational nodes with sub-50ms latency.

EDUCATION

Master of Computer Applications (MCA) · Presidency College, Bangalore 2021 – 2022
Bachelor of Computer Applications (BCA) · Purnea College, Purnea 2016 – 2020
